The Triad for Your Success

» The Triad for your success.

Software and Systems Engineering –
Method Park combines skills to create
a one-stop solution.

Consulting

In the end, it's the beginning that counts. That's why we **analyze** the status quo first. And then **communicate** what we can do for you.

Implementing

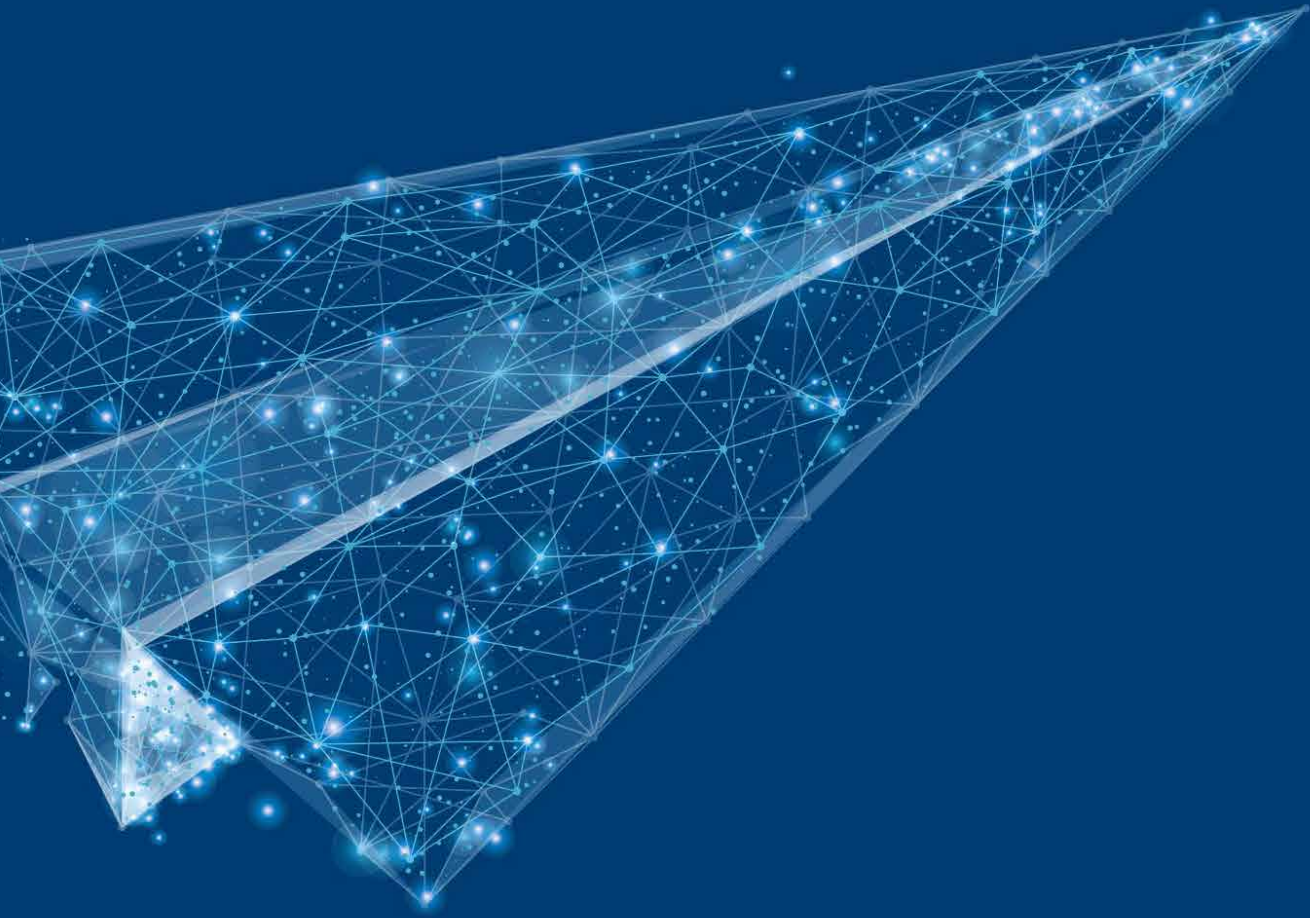

We change things: in collaboration with you, we create **tailored** processes that bring your company up-to-date and even further.

Mastering

From advice to support, from providing the right tool to training and coaching, we **simplify processes and master complexity.**

» CONSULTING

The secret of every
successful project:
Let us talk at eye level!

Every organization faces its individual challenges. From the first meeting to requirements specifications – rely on us as the partner by your side.

For us, Consulting means communication: You indicate the need for action - we analyze the status quo and ask the right questions, so our answer is always honest, comprehensive and competent. Our experts combine their skills and think outside the box. So, you receive an overview and guarantee when it comes to deadlines, costs and planning – fair and transparent. »

Our Consultants are experts in addressing challenges such as implementing **Automotive SPICE®**. They are familiar with the requirements arising from the evaluation, selection, adjustment and introduction of tool chains. They are experienced in **Agility** for environments related to Functional Safety and Medical Device Regulations and master specific challenges in the field of **AUTOSAR**. This know-how, combined with our broad course program, promotes the future viability of your product development and organization.

Your Benefits

- Overall, inter-disciplinary combination of skills among Consultants and Engineers from all specialist departments.
- Broad one-stop portfolio ranging from Gap Analyses over high-level Consulting to Engineering.
- Deep insights into all fields of safety-relevant industries such as Automotive, Aerospace and Medical Technology.
- Application of automated and cost-efficient practices in consulting processes.
- Cooperative and individual Consulting and know-how transfer, ensuring self-sufficiency of your project teams.
- Industry-specific knowledge in current standards, norms and regulations.

» IMPLEMENTING

Step by step towards process efficiency and market-mature products: we support you – take our word!

Powerful tools instead of buzzwords. We offer tools and methods to optimize processes and product lifecycles.

Highly specialized tasks require tailored tools and process expertise. We have exactly what you need for the introduction of new technologies in your organization. You save time and money – even for complex implementations such as blockchains, apps, machine learning, agile transformation, or the development of safety-relevant software components. We encourage you to embrace change, by analysing the status quo and boosting your individual motivation. »

We are experts in successful **Software and Systems Engineering**. We implement your projects by harnessing **innovations for your product development**. We create **acceptance** for profound changes such as the introduction of **agile development methods**, and new **processes** or **tools** such as **Stages**. Efficient **software tests** ensure that quality meets your requirements. Everything goes according to plan and you are on the safe side.

Your Benefits

- Integrated view of your organization, your industry and processes.

 - Explicit identification of improvement potential.

 - Individual optimization by global Process Management with Stages.

 - Easy overview of complex projects with practice-based Application Lifecycle Management (ALM).
- High-quality and secure software, offering smooth interaction between Requirements Engineering, Software and Systems Architecture, Quality Assurance, and Testing.

 - Up-to-date Systems Engineering for the integration of intelligent systems into development, to ensure future-proof products.

» MASTERING

Simplify processes – master complexity: Together, we secure the already achieved successes and promote your future potential!!

The individual fitness program for your organization. From Consulting over implementation to the right tool.

After defining the goal, a tailored tool is key: Stages supports you on mastering the complexity in product development. This tool enables you to easily and transparently model your processes according to standards and regulations, and to ensure their compliance. With our continuous support, you always stay up to date, since we offer modern development methods and tools. You remain fit for the ongoing organizational change and keep decision-relevant know-how up to date – interdisciplinary and globally. »

Consultants and Engineers combine their expertise in **Project Support, Process Consulting, Training and Coaching. Stages** guarantees continuous control and improvement of all processes in your organization. Additionally, we maintain and update your **Toolchain**. In the age of **Digitalization, Artificial Intelligence and Cyber Security**, we harness new technologies for you. Our broad course program and platforms such as “Talk in the Park” offer ongoing training and **productive exchange of experience**.

Your Benefits

- Continuous support – even after your project has ended and always with the promise “state-of-the-art”.
- Global locations and expertise in Stages implementation for the automotive, aerospace and medical technology industries.
- Know-how and expertise excellence, derived from lifelong learning, in courses, workshops, and training, specialist literature, themed posters and practice-based Pocket Guides.
- Transparent transformation based on structured process management with Stages.
- Compliance of your product development, to all legislative regulations and norms, transnational and country-specific, with Stages.
- Long-term knowledge of your organization for responsive and on-site assistance without duplicative training efforts.
